RECOVERY AND GREEN COMFORT

organic fertilizers for a beautiful lawn

- Both fertilizers provide the discerning gardener with the ideal nutrients to produce the best possible lawn
- Help lawns to recover after stressful periods like drought, flood, heavy play or even neglect
- Only two applications per year makes sure that your lawn is fed most effectively
- See over for more information on how to grow the most comfortable lawn whilst removing the hard work

Recovery

Recovery is an organic fertilizer which contains the effective ingredients of nitrogen, phosphate 6, potash 13 plus magnesium 3, all mixed with Humifirst, a unique ingredient which creates biological activity and acts as a plant growth stimulant. Humifirst attaches itself to particles of soil and improves the soil structure so that it is able to hold more nutrients and water. Grass roots latch on to the soil particles which stimulates healthy growth that is almost immediately evident. Your lawn will continue to improve, look healthy, and be fed in a most effective way for twelve weeks. Recovery is ideal for use after times of high grass stress like drought, flooding or hard wear.

Recovery comes in 20kg bags (granular form) which covers 200 sq.mtrs.

Green Comfort

Organic fertilizers are made from a wide variety of naturally occurring organic materials which all release their nutrients after different periods of time giving your lawn a consistent feed over a twelve week period. Green Comfort has effective ingredients of nitrogen, phosphate and potash + magnesium of 7-5-8 + 3 and is ideal for keeping your lawn healthy and green throughout the growing season giving you a lawn for the whole family to enjoy. That is why we call it Green Comfort.

Green Comfort comes in 20kg bags (granular form) which covers 200 sq. mtrs.

Beautiful lawns without the back-ache
